

## Photo Gallery Mini Template

### Features

- xml feed gallery
- easy resizable
- easy to update
- the script reads the xml and automatically generates categories and sets thumbs
- auto center to screen
- settings for thumb size (on settings script layer)
- sequentially loaded images
- preloaders for thumbs and big images
- missing files won't stuck loading
- loads first the thumbs on screen(in case you roll away)
- pauses thumbs loading on big image preloading
- animations with done with Tweeners class(easy to customize)
- The font used is Share-Regular; supplied within the pack

### Quick install

- Edit the logo and the about page
- Edit the footer for your needs
- Resize the gallery using scale tool or setting the dimensions for the "gallery" from the main stage
- Set the desired thumb size
- Make sure you have in the compile folder the caurina folder(Tweener class) and the GetFile.as (as class for loading files)
- Edit the xml file by adding inputs.  
One input for a photo looks like this:

```
<item title="some photo 2" image="pics/pic3.jpg" thumb="pics/pic3_t.jpg" category="People">
<![CDATA[ mini info text ]]>
</item>
```

### Details

**title** – title of the photo

**image** - path to big image file

**thumb** – path to thumb file

**category** – write here the category name (flash reads this and creates categories and puts thumbs in it)

**<![CDATA[ mini info text ]]>** between these red tags you can put html formatted text to represent other info about that picture
